

Window Function in SQL

Ami Rai E.

Introduction

- ▶ An aggregate function returns a single result for the values from one or multiple rows
- ▶ Although a window function does the same functionality of an aggregate function, it is different from an aggregate function
- ▶ A Window function returns value for each row for the values from one or multiple rows
- ▶ MySQL support window functions

Relation Schema – Employees

- ▶ Consider the Employees schema used in the following examples

```
CREATE TABLE Employees (  
    Emp_no      INT           PRIMARY KEY,  
    First_name  VARCHAR(20)   NOT NULL,  
    Last_name   VARCHAR(20)   NOT NULL,  
    Gender      ENUM ('M', 'F') NOT NULL,  
    Dept_no     CHAR(4)       NOT NULL,  
    Salary      INT           NOT NULL  
);
```

Relation State

- ▶ There are 50 rows in the Employees table
- ▶ Consider the part of the populated table

| | Emp_no | First_name | Last_name | Gender | Dept_no | Salary |
|---|--------|------------|-----------|--------|---------|--------|
| ▶ | 10001 | Georgi | Facello | M | d009 | 62000 |
| | 10002 | Bezalel | Simmel | F | d007 | 65000 |
| | 10003 | Parto | Bamford | M | d004 | 43000 |
| | 10004 | Chirstian | Koblick | M | d004 | 42000 |
| | 10005 | Kyoichi | Maliniak | M | d003 | 54000 |
| | 10006 | Anneke | Preusig | F | d001 | 83000 |
| | 10007 | Tzvetan | Zielinski | F | d008 | 47000 |
| | 10008 | Saniya | Kalloufi | M | d002 | 63000 |
| | 10009 | Sumant | Peac | F | d006 | 71000 |
| | 10010 | Duangkaew | Piveteau | F | d004 | 84000 |
| | 10011 | Mary | Sluis | F | d006 | 69000 |
| | 10012 | Patricio | Bridgland | M | d009 | 85000 |
| | 10013 | Eberhardt | Terkki | M | d009 | 79000 |
| | 10014 | Berni | Genin | M | d003 | 44000 |
| | 10015 | Guoxiang | Nooteboom | M | d002 | 54000 |

Aggregate Function in SQL

Average salary of all employees

```
SELECT  
    AVG(Salary) AS avg_sal  
FROM  
    Employees;
```

| Result Grid | |
|-------------|------------|
| | avg_sal |
| ▶ | 62200.0000 |

- ▶ AVG() function is used
- ▶ A single result is obtained for all the rows

Average salary of employees in each department

```
SELECT  
    Dept_no, AVG(Salary) AS avg_sal  
FROM  
    Employees  
GROUP BY Dept_no;
```

| Result Grid | | |  |  | Filter |
|-------------|---------|------------|---|---|--------|
| | Dept_no | avg_sal | | | |
| ▶ | d009 | 71400.0000 | | | |
| | d007 | 59333.3333 | | | |
| | d004 | 60428.5714 | | | |
| | d003 | 59500.0000 | | | |
| | d001 | 66200.0000 | | | |
| | d008 | 62000.0000 | | | |
| | d002 | 61000.0000 | | | |
| | d006 | 64250.0000 | | | |
| | d005 | 58714.2857 | | | |

- ▶ GROUP BY clause is used to group the employees according to the department number
- ▶ A single result for all rows in each group is obtained
- ▶ Order of department number is not considered

Average salary of employees in each department (in an order)

```
SELECT
    Dept_no, AVG(Salary) AS avg_sal
FROM
    Employees
GROUP BY Dept_no
ORDER BY Dept_no;
```

| Result Grid | | | Filter Rc |
|-------------|---------|------------|-----------|
| | Dept_no | avg_sal | |
| ▶ | d001 | 66200.0000 | |
| | d002 | 61000.0000 | |
| | d003 | 59500.0000 | |
| | d004 | 60428.5714 | |
| | d005 | 58714.2857 | |
| | d006 | 64250.0000 | |
| | d007 | 59333.3333 | |
| | d008 | 62000.0000 | |
| | d009 | 71400.0000 | |

- ▶ ORDER BY clause is used to get the result in the order of department numbers
- ▶ A single result for all rows in each group is obtained

Number of employees in each department

```
SELECT
    Dept_no, COUNT(Emp_no) AS Count
FROM
    Employees
GROUP BY
    Dept_no
ORDER BY Dept_no;
```

| Result Grid | | |
|-------------|---------|-------|
| | Dept_no | Count |
| ▶ | d001 | 5 |
| | d002 | 7 |
| | d003 | 4 |
| | d004 | 7 |
| | d005 | 7 |
| | d006 | 4 |
| | d007 | 6 |
| | d008 | 5 |
| | d009 | 5 |

- ▶ A single result for all rows in each group is obtained
- ▶ COUNT() is used to get the number of rows matching the condition

Number of employees in each department based on gender

```
SELECT
    Dept_no, Gender, COUNT(Emp_no) AS Count
FROM
    Employees
GROUP BY
    Dept_no, Gender
ORDER BY Dept_no;
```

| | Dept_no | Gender | Count |
|---|---------|--------|-------|
| ▶ | d001 | M | 3 |
| | d001 | F | 2 |
| | d002 | M | 6 |
| | d002 | F | 1 |
| | d003 | M | 3 |
| | d003 | F | 1 |
| | d004 | M | 5 |
| | d004 | F | 2 |
| | d005 | M | 5 |
| | d005 | F | 2 |
| | d006 | M | 1 |
| | d006 | F | 3 |
| | d007 | M | 3 |
| | d007 | F | 3 |
| | d008 | M | 3 |

- ▶ A part of the complete result is shown
- ▶ A single result for all rows in each group is obtained
- ▶ Grouping is done based on department number and gender

Window Function in SQL

Average salary of all employees

```
SELECT  
    Dept_no, AVG(Salary) OVER() AS avg_sal  
FROM  
    Employees  
ORDER BY Dept_no;
```

| Result Grid | | | Filter F |
|-------------|---------|------------|----------|
| | Dept_no | avg_sal | |
| ▶ | d001 | 62200.0000 | |
| | d001 | 62200.0000 | |
| | d001 | 62200.0000 | |
| | d001 | 62200.0000 | |
| | d001 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d002 | 62200.0000 | |
| | d003 | 62200.0000 | |
| | d003 | 62200.0000 | |
| | d003 | 62200.0000 | |

- ▶ Result for each row is obtained
- ▶ OVER clause is empty
- ▶ OVER clause specifies how to partition query rows into groups

Average salary of employees in each department

```
SELECT  
    Dept_no, AVG(Salary) OVER(PARTITION BY Dept_no) AS avg_sal  
FROM  
    Employees  
ORDER BY dept_no;
```

| Result Grid | | | Filter |
|-------------|---------|------------|--------|
| | Dept_no | avg_sal | |
| ▶ | d001 | 66200.0000 | |
| | d001 | 66200.0000 | |
| | d001 | 66200.0000 | |
| | d001 | 66200.0000 | |
| | d001 | 66200.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d002 | 61000.0000 | |
| | d003 | 59500.0000 | |
| | d003 | 59500.0000 | |
| | d003 | 59500.0000 | |

- ▶ A part of the complete result is shown
- ▶ OVER clause partitions rows by department number
- ▶ Result for each partition row is obtained

Average salary of employees in each department (remove duplicates)

```
SELECT
    DISTINCT Dept_no,
    AVG(salary) over(partition by Dept_no) AS avg_sal
FROM
    Employees
ORDER BY Dept_no;
```

| Result Grid | | |  |  | Filter |
|-------------|---------|------------|---|---|--------|
| | dept_no | avg_sal | | | |
| ▶ | d001 | 66200.0000 | | | |
| | d002 | 61000.0000 | | | |
| | d003 | 59500.0000 | | | |
| | d004 | 60428.5714 | | | |
| | d005 | 58714.2857 | | | |
| | d006 | 64250.0000 | | | |
| | d007 | 59333.3333 | | | |
| | d008 | 62000.0000 | | | |
| | d009 | 71400.0000 | | | |

- ▶ The duplicated rows are removed by using DISTINCT keyword

Number of employees in each department

```
SELECT
    Dept_no,
    COUNT(Emp_no) over(partition by Dept_no) AS Count
FROM
    Employees
ORDER BY Dept_no;
```

| | Dept_no | Count |
|---|---------|-------|
| ▶ | d001 | 5 |
| | d001 | 5 |
| | d001 | 5 |
| | d001 | 5 |
| | d001 | 5 |
| | d002 | 7 |
| | d002 | 7 |
| | d002 | 7 |
| | d002 | 7 |
| | d002 | 7 |
| | d002 | 7 |
| | d002 | 7 |
| | d003 | 4 |
| | d003 | 4 |

- ▶ A part of the complete result is shown
- ▶ Partition is based on department number

Number of employees in each department based on gender

```
SELECT
    Dept_no,
    Gender,
    COUNT(Emp_no) over(partition by Dept_no, Gender) AS Count
FROM
    Employees
ORDER BY Dept_no;
```

| Result Grid | | | | Filter Rows |
|-------------|---------|--------|-------|-------------|
| | Dept_no | Gender | Count | |
| ▶ | d001 | M | 3 | |
| | d001 | M | 3 | |
| | d001 | M | 3 | |
| | d001 | F | 2 | |
| | d001 | F | 2 | |
| | d002 | M | 6 | |
| | d002 | M | 6 | |
| | d002 | M | 6 | |
| | d002 | M | 6 | |
| | d002 | M | 6 | |
| | d002 | M | 6 | |
| | d002 | F | 1 | |
| | d003 | M | 3 | |
| | d003 | M | 3 | |

- ▶ A part of the complete result is shown
- ▶ Partition is based on department number and gender

Number of employees in each department based on gender (remove duplicates)

```
SELECT
    DISTINCT Dept_no,
    Gender,
    COUNT(Emp_no) over(partition by Dept_no, Gender) AS Count
FROM
    Employees
ORDER BY Dept_no;
```

- ▶ A part of the complete result is shown
- ▶ Partition is based on department number and gender
- ▶ DISTINCT keyword is used to remove the duplicates

| Result Grid | | | | Filter Rows: |
|-------------|---------|--------|-------|--------------|
| | Dept_no | Gender | Count | |
| ▶ | d001 | M | 3 | |
| | d001 | F | 2 | |
| | d002 | M | 6 | |
| | d002 | F | 1 | |
| | d003 | M | 3 | |
| | d003 | F | 1 | |
| | d004 | M | 5 | |
| | d004 | F | 2 | |
| | d005 | M | 5 | |
| | d005 | F | 2 | |
| | d006 | M | 1 | |
| | d006 | F | 3 | |
| | d007 | M | 3 | |
| | d007 | F | 3 | |
| | d008 | M | 3 | |

Conclusion

- ▶ Both window function and aggregate functions serve the same purpose
- ▶ Difference – The aggregate function returns a single result for all the rows and the window function returns result for each row

Thank You!!
